Working Papers

Connectivity and Crime: The Impact of Broadband Availability on Sexual Assaults in India (with Gitanjali Sen), *Submitted*; Job Market Paper

Abstract: We study the impact of internet expansion on crimes against women in rural India by constructing a new geocoded village-level dataset on broadband connectivity. Exploiting spatial regression discontinuity around the BharatNet rollout boundary, we find that broadband access increases reported sex crimes across media sources, police FIRs, and administrative crime records. We document a rise in cybercrimes, including cyberstalking and the circulation of obscene materials, supported by faster download and upload speeds. We find greater uptake in mass media consumption among males and younger cohorts. Results are robust to alternative specifications and placebo tests, underscoring the need for digital safeguards.

From Workforce to Grandparenting: Navigating the Challenges of Informal Childcare (with Gitanjali Sen), *Under Review*

Abstract: This study examines the impact of grandchild care on the labor market outcomes of grandparents amid the rapid aging and feminization of the global population. Employing an instrumental variable approach, we find a substantial negative effect on the employment rate of grandmothers, particularly for those cohabiting with their children, while no significant effect is observed for grandfathers. These findings suggest that grandchild caregiving contributes to the gender gap in labor force participation among the elderly, with a more pronounced effect in urban areas. We also find that the reduction in labor supply occurs primarily among younger grandmothers, indicating an early withdrawal from the workforce.
